

Saving the Planet

Jillian G

Global Warming

Global warming is when the Earth gets too hot. Two things that causes global warming are smoking and leaving your lights on when you are not using them.

Two things that will stop global warming: Do not turn your lights on so much and ride your bike—do not use your car so much.

Hurricane Katrina

Hurricane Katrina was 1 of the most strongest Hurricane in the world. It happened in 2005 in Louisiana.

Global Warming effected Hurricane Katrina when the heat got too hot and the hurricane went over a warm water ocean. The wind got stronger and the hurricane got stronger.

Energy

3 types of renewable energy are solar, wind, and hydropower. These types cause less pollution and are better for the environment.

What Can Your School Do to Save The Planet?

Our school can help save the planet by recycling. They can also have a class on global warming and how to save the planet.
