

Saving the Planet

Global Warming

Global warming is the heating up of the Earth. It is caused by pollution by cars, burning fossil fuels, and even hairspray.

We can help stop it by turning off the computers and tv when they are not being used.

Hurricane Katrina

It is of the strongest hurricane in America in August in 2005. It destroyed New Orleans, Louisiana. The hurricane got stronger because of a hot patch of water in the ocean, which was caused by global warming

Energy

The three types of energy that you can reuse are water, sun, and wind.

They do not pollute the air and are natural.

Remy

What Can Your School Do to Save The Planet?

My school can save the planet by recycling and turning the computers off when they are not in use.
