

Saving the Planet

Global Warming

Global warming is when the earth gets too hot. Smoking makes the atmosphere thicker, so we should stop smoking. When we drive cars gas gets in the air and it also makes the atmosphere get thicker, so we should walk more.

Hurricane Katrina

Hurricane Katrina is one of the most deadliest hurricanes, it hit New Orleans.

Global warming affected hurricane Katrina by warming up the water and that made the hurricane stronger.

Energy

Sunlight and water are two forms of reusable energy. Water and sunlight are better for the planet because they don't pollute the air.

What Can Your School Do to Save The Planet?

My school can help save the planet by giving a class on global warming.
