

Saving the Planet

Global Warming

Global warming is when the earth gets too hot.

One thing that can cause global warming is leaving your tv on. And if you use your car.

Stop cutting down trees and stop smoking!

Hurricane Katrina

Hurricane Katrina is one of the most deadliest hurricanes in the history of the United States. It hit New Orleans in 2005.

Hurricane Katrina got stronger after passing a hot patch of water in the gulf coast. The water was hot because of global warming

Energy

Two forms of renewable energy are sunlight and wind.

Renewable energy is better for the planet because it doesn't cause pollution and it can be reused.

What Can Your School Do to Save The Planet?

My school can save the planet by recycling and turning off all the computers when they are not being used.
