## Energy

## Michael

### Global Warming

Global warming is when the Earth gets hot. It is caused by pollution from cars, smoking, and burning fossil fuels.

### Hurricane Katrina

Hurricane Katrina was one of the deadliest hurricanes in the U.S. It hit New Orleans in 2005.

Because of global warming, there was a patch of hot water in the ocean, which caused the hurricane to get stronger.

Using water and sun forms energy and it does not cause pollution and you can reuse them

### What Can Your School Do to Save The Planet?

My school can save the planet by teaching a class on global warming, energy, and recycling.
